PROFESSIONAL SKILLS

Frontend: React, HTML5, CSS3, JavaScript (ES6+), Bootstrap, Tailwind, AlpineJS

Backend: Node.js, TypeScript, PHP, Laravel

Cloud: AWS (Serverless – Lambda, API Gateway, EventBridge, DynamoDB, S3, SQS, SNS, IAM, CloudWatch, X-Ray)

DevOps: Terraform, GitHub actions, BitBucket pipelines, Docker

Methodologies: RESTful API design, Agile (Scrum/Kanban), OOP, TDD

Training & mentoring juniors

EDUCATION

BACHELOR OF SCIENCE (HONS)/ COMPUTER GAMES TECHNOLOGY- FIRST CLASS 1;1

Manchester Metropolitan University

Modules of Note: Algorithms & Data Structures, Web Development

Dissertation: AI powered chess engine in Java

EXPERIENCE

SOFTWARE ENGINEER II

Apr 2025 - Aug 2020

Suits Me

Promoted from Junior Developer -> Software Engineer I → Software Engineer II

- Took ownership of an internal CRM from inception to delivery, collaborating closely with stakeholders to define requirements and deliver a production-ready system. Built using React, TypeScript, and PHP/Laravel, significantly improving customer engagement and internal operational efficiency.

- Designed and developed backend services and banking microservices in PHP/Laravel, strengthening system reliability and maintainability.

- Drove key aspects of the integration of a new banking provider, refactoring existing microservices to support new APIs while concurrently contributing to a full rebuild of the customer onboarding journey.

- Played a key role in migrating a large-scale legacy PHP platform to a modern TypeScript/Node.js architecture on AWS, leveraging event-driven serverless patterns (Lambda, S3, EventBridge, API Gateway, SQS) and Terraform for infrastructure as code.

- Implemented comprehensive testing strategies across unit, integration, and end-to-end levels, contributing to higher release confidence and reduced production defects.

- Investigated and resolved production issues via service desk support, using AWS X-Ray and CloudWatch to trace failures, identify root causes, and deliver timely fixes.

- Contribued to CI/CD deployment workflows, improving release processes and reducing manual intervention.

- Collaborated cross-functionally with product, QA and business stakeholders to deliver features aligned with user and business needs.

- Mentored junior developers across frontend, backend, and DevOps, improving team capability and development standards.

RESTAURANT SUPERVISOR

Dec 2019 - Jan 2016

The Botanist

Promoted from Server -> Head Server -> In-store trainer -> Restaurant Supervisor

- Supervised daily restaurant operations, ensuring efficient service, smooth workflow and consistently high customer experience standards.

- Led, trained and mentored team members on service quality, menu knowledge, operational procedures, improving team performance and consistency.

- Managed staff scheduling, shift coordination, and floor planning to optimise service during peak periods.

- Resolved customer issues and complaints professionally, maintaining high satisfaction and repeat business.

- Oversaw opening and closing procedures, including cash handling, stock checks, and compliance with operational standards.

- Supported onboarding and training of new staff, contributing to faster ramp-up and stronger team cohesion.
